

We can perform brain surgery
without a single incision...

The future of health is **here**

When you are treated at Macquarie University Hospital you can expect everything to be beyond the ordinary. Astonishing technology at the forefront of medicine, including Australia's only Gamma Knife, enabling brain tumours to be treated without invasive surgery. World class specialists, many of whom work in teams to ensure every part of your treatment is synchronised. A digital, paperless environment that ensures your medical records appear instantly and you can be treated sooner and more safely. Beautiful and healing surroundings where every modern comfort is at your fingertips.

To find out more about treatment at Macquarie University Hospital ask your GP, or visit our website.
